## About me

I am a passionate Software Engineer with hands-on experience building full-stack, mobile, and real-time applications across industries like advertisement, mobility, and SaaS. I've designed and implemented scalable systems integrating technologies such as React, Spring Boot, Firebase, and Agora SDK. My work spans from real-time communication and payment integration to data-driven automation tools. I thrive on turning complex problems into elegant software solutions and am currently seeking a Software Engineering internship to contribute to impactful, innovative projects.

## Work experience

**B-Hitech**, Remote — New York/USA

October-2025 to Now

### *Software Engineer*

- Achievements:**
- Developed and deployed real-time audio/video communication and a secure subscription system, enhancing user engagement and supporting the app's monetization strategy.
- Responsibilities:**
- Designed and optimized frontend and backend features for scalable real-time communication.
  - Collaborated with product teams to enhance user experience and ensure smooth integration of subscription workflows.
- Environment:**
- Flutter, Agora SDK, Stripe SDK, Firebase (Authentication, Firestore, Messaging, Storage), Cloud Functions.

**Byne Media**, Remote — Dakar/Senegal

Jul-2025 to Sep-2025

### *Full Stack Developer*

- Achievements:**
- Built and integrated core full-stack features for a digital advertising platform, enabling real-time campaign management, payment processing, and dynamic LED screen updates across the city.
- Responsibilities:**
- Built backend APIs and dashboards for campaign management and analytics.
  - Implemented a secure payment system enabling advertisers to launch and monitor campaigns seamlessly.
  - Collaborated with the client to ensure smooth integration between software and physical media devices.
  - Enhanced system performance to support large-scale concurrent users.
- Environment:**
- NextJs, Firebase (Authentication, Firestore, Messaging, Storage), CinetPay SDK

**Xplicity**, Remote — London/UK

Jul-2024 to Jun-2025

### **Software Engineer Intern**

- Achievements:**
- Contributed to the development of a no-code website builder, designing and implementing key features such as a visual workflow automation system, a data management module, and reusable UI components to enable users to create and customize their own websites effortlessly.
- Responsibilities:**
- Contributed to the core system by designing reusable UI components for dynamic website creation.
  - Built a visual workflow builder enabling users to automate processes and integrate external services intuitively.
  - Developed the Data feature, allowing users to create, import, and manage custom tables within the platform.
- Environment:**
- Python, React, Windmill, Hasura, Minio, ArgoCd, Glide Data Grid, ReactFlow, RekaJs, Postgres, GCP

**SUPMTI**, Morocco

Mar-2024 to Jul-2024

### **Mobile Developer Intern**

- Achievements:**
- Designed and developed a parking management mobile app with a Spring Boot backend and secure Firebase Authentication, improving space optimization and user access control.
- Responsibilities:**
- Implemented a secure backend using Spring Boot and PostgreSQL for data management.
  - Developed Android UI screens and features with real-time backend integration.
  - Integrated Firebase Authentication to provide secure user access and account management.
- Environment:**
- Java, Spring Boot, PostgreSQL, Firebase (Authentication, Firestore, Messaging, Storage), Android Studio, REST API, MVC architecture.

## **Education**

**SupMTI**, Rabat, Morocco

2024 - Current

Master's in Software Engineering

**SupMTI**, Meknes, Morocco

2021 - 2023

Bachelor's in Computer System Engineering
